

Distribution Brush

Distribution Brush

We have expanded our brush range to include a distribution brush for large calibre weapon barrels which can distribute oils and fluids evenly through the barrel to either remove stubborn firing deposits or oil the barrel after cleaning for storage. The distribution brushes are available for all barrels from 30mm up to 155mm and work with the existing system.

A range of fluids are available through Airmesco which can be used with the distribution brushes to remove stubborn deposits. Please see the Oils and Fluids factsheet for more information.

Along with our latest developments; cerakoted finish, chamber expanding brush, new range of cleaning fluids, enhanced safety couplings and the F701C Ferret, the Airmesco Bore Cleaning System continues to lead the way in Automated Barrel Cleaning Systems from 20mm up to 203mm for all NATO, non-NATO, chromed, smooth or rifled weapons including mortars and launchers. Fully codified and certificated with over 20 years of exclusive use within the British and US Forces, amongst many others.

For more information please visit www.airnesco.com, email us on info@airnesco or call us on 01622 850470.
